ABSTRACTED-PUB-NO: DD 257379A

BASIC-ABSTRACT:

New agents for killing plants or plant parts contain, in addition to usual adjuvants and carriers, a combination of (A) 3,5-dibromo-4-hydroxy benzonitrile (I) or 3,5-diiodo-4-hydroxy benzonitrile (II) with (B) (1) monochloroacetic acid (III) or monobromoacetic acid (IV), or (2) 2-chloro-6-methyl-4 benzylphenol (V), or (3) 1-butylamino-cyclohexane phosphonic acid dibutyl ester (VI), or (4) (VI) and 2-methylthio-4-ethylamino-6-isopropyl amino-1,3,5-triazine (VII), or (5) sodium chlorate (VIII) and ammonium peroxydisulphate (IX).

USE/ADVANTAGE - Synergistic herbicidal combinations for use as siccatives and for combatting undesired plant growth. The combination are particularly useful as siccatives for use on potato plants, pulses and rape before harvesting. In comparison with known herbicides, the new combination have higher activity, reduced toxicity and reduced susceptibility of tubers of treated potatoes to Phytophthora infestants infection.
